In this research paper, we present the use of manga, a medium distinct from explanatory text, as a means of expressing patterns. This approach aims to convey and disseminate pattern languages to the general public. In recent years, pattern languages of practices have shifted from targeting experts, such as those in the software field, to engaging the general public as readers. It is believed that traditional explanatory texts may have limitations in reaching a broader audience. Therefore, to enable the contents of pattern languages to appeal to a wider audience, we propose the way of expressing patterns through *manga*. Manga is a medium beloved by people of all ages, from children to adults. It combines illustrations and dialogue within frames to depict the progression of a story. In this paper, we present examples of three types of manga representations as prototypes of pattern manga. Type I is “Four-frame Manga for a Pattern,” which presents the content of a pattern as a short story in a four-frame format. For this type, we introduce multiple prototypes representing patterns from *Learning Patterns* and *Words for a Dialogue*, providing several models for composing the four-frame format. Additionally, four composition models in this format are provided as followed: “Behavioral Change,” “Obedient Practitioner,” “Solution Idea Starting,” and “Witness and Learn.” Type II is “A Short Story Manga for a Pattern,” which introduces a single pattern as a standalone short story. For this type, we present a prototype showcasing a pattern from *Words for a Journey*, a pattern language for those with dementia and their families. Type III is “A Long Story Manga Including Patterns,” which integrates multiple patterns within a series of stories. For this type, we illustrate with two prototypes: the first depicts a chapter from a series in which the protagonist employs a pattern of *Fearless Change* by Mary Lynn Manns and Linda Rising; the second portrays a chapter from a series where the protagonist adopts some patterns from *Collaboration Patterns*. All original descriptions of each pattern are provided in the Appendix. Lastly, we discuss why manga is a fitting medium for expressing pattern languages, focusing on characteristics such as (1) timeliness, (2) everydayness, and (3) entertainment value. We aspire to expand the possibilities for the broader dissemination and adoption of pattern languages.

Categories and Subject Descriptors: **[Social and professional topics]**: Professional topics—*Informal education*; **[Social and professional topics]**: User characteristics—*Cultural characteristics*; **[Applied computing]**: Arts and humanities—*Media arts*

General Terms: Human Factors

Additional Key Words and Phrases: pattern language, storytelling, manga, comic

1. INTRODUCTION

In Christopher Alexander’s proposal of pattern language, patterns were initially described and shared through written text, photographs, and sketches (Alexander *et al.*, 1977). Initially, the patterns were shared in the form of paper descriptions held together in binders, but, after the publication of *A Pattern Language* (Alexander *et al.*, 1977), people learned Alexander’s pattern language by reading the book. Other pattern languages in the field of architecture that followed Alexander also consist of written text, photographs, and sketches. Pattern language in architecture was created to bridge the gap between architects and residents in designing and creating buildings and towns together. Therefore, pattern descriptions were intended to be accessible to the general public, written in simple language that evokes imagery.

About ten years later, pattern language was applied in the field of software (Beck and Cunningham, 1987). In this context, pattern descriptions were composed of written text and diagrams. Patterns were shared as web (wiki) pages, internal documents, and conference papers, and later compiled and published as books (Gamma, *et al.*, 1994). Design Patterns became a widely read resource for many engineers and engineering students. In

the software field, the readers of patterns were engineers. Patterns were used as a means to share design knowledge among engineers. While pattern language in architecture served as a medium between experts and the general public, in the software field, it was used to bridge the gap between expert engineers and novice engineers. Therefore, pattern descriptions were expected to be more precise and detailed.

As time went on, pattern language was applied in the realm of everyday practices. It expanded its application to areas such as education, work, creativity, daily life, and welfare. While the descriptions of patterns primarily consist of written text, especially us, Iba Laboratory, a single illustration symbolizing the content of the pattern is included as an important element in patterns alongside the pattern name (Harasawa *et al.*, 2012; Miyazaki, *et al.*, 2015; Iba and Iba Lab, 2015; Munakata, *et al.*, 2018; Iba *et al.*, 2021).

The use of illustrations when creating *Learning Patterns* (Iba *et al.*, 2009; Iba and Iba Lab, 2014a) is justified because practice encompasses a set of behaviors of internal thinking and action, which cannot be represented with photographs or sketches used for the objective structures targeted in architecture or software. With illustrations, emotions and movements can be expressed clearly, omitting unnecessary parts. Metaphors can also be incorporated into the illustrations [specific details on pattern illustrations are presented in our paper, Iba *et al.*, (2021)].

In the domain of pattern language for practices (especially for us, Iba Laboratory), is used not only for learning through reading pattern descriptions but also as a medium for peer learning through dialogues, where individuals share their experiences using the pattern language (Iba, 2015). This suggests that pattern language is utilized to bridge the gap between the experiences of the general public, in addition to its ways of use in the architecture and software fields. Consequently, when pattern language is used among the general public rather than experts, new challenges arise. One such challenge is how to deliver pattern language more widely to the general, including elementary school students, middle and high school students, university students, parents raising children, busy business professionals and educators, as well as the elderly and individuals suffering from illness.

In response to this challenge, Takashi Iba, one of this paper's author, have created and provided "Pattern Cards" (Iba, 2016; Figure 1) since 2014. Instead of book or paper form, the cards are well-suited for workshops or individual use, serving as a tool for facilitating discussion or for re-arranging on a tabletop to stimulate thought. In Japan, such pattern cards have been created and provided across approximately 20 kinds of pattern languages. They have been widely used in various settings across the country, including households, elementary schools, middle and high schools, universities and graduate schools, workplaces, professional training sessions, gatherings of experts, elderly care facilities, and community meetings, as shown in Figure 2. And, Figure 3 shows the scenes of workshops with using Pattern Cards, which were held outside Japan, such as, United States, Austria, Portugal, and Democratic Republic of the Congo.

We also proposed "Pattern Objects" that embed patterns into everyday objects, making them visible in practical scenes, and created prototypes (Iba, *et al.*, 2016c). By printing pattern names and illustrations on items such as clips, candy boxes, cutting boards, baskets, and other everyday objects, the patterns were embedded into environments where their practice would be necessary to easily recalled and individuals are encouraged to follow them (Figure 4). We have also developed products like folders with pattern names and illustrations, which can be carried and used daily (e.g., *Project Design Patterns*, *Omotenashi Design Patterns*, *Active Learning Patterns for Teachers*, *Life with Reading patterns*). Additionally, we created "Pattern Coins," wooden chips with pattern names, illustrations, and solution sentence, which are gift-economic media for promoting chains of practice (Iba *et al.*, 2023). We conducted trials of actually utilizing Pattern Coins at Iba Lab in Japan, and EuroPLoP2023 conference in Germany (Figure 5).

We have also created a "Pattern Song" as part of our efforts to make patterns more accessible in our daily lives (Iba, *et al.*, 2018). This song incorporates the essence of pattern content and pattern names into lyrics (Figure 6). It is not a mnemonic or parody song but an original pop song that naturally and enjoyably conveys the essential aspects of the patterns, encouraging listeners. Our first pattern song, "Everyday World," is currently available on various music streaming platforms, including Spotify¹, and plays a role in pushing people towards practical application.

In addition to the Pattern Song, we have taken on the challenge of finding ways to reach a wider audience with the pattern language and promote its practical use. One of our latest endeavors, which is presented in this paper, involves expressing patterns of a pattern language through *manga*. Recognizing that many people may not feel inclined to read serious texts, we believe that the possibility of engaging a broader range of individuals

¹ <https://open.spotify.com/album/2RmeBsS7tqKLuLbr9L69QQ>

increases when patterns are presented in the form of manga. Therefore, we decided to represent pattern language through manga. We would like to emphasize that the aim of pattern manga is not to replace written pattern descriptions or to render them obsolete. Rather, the goal is, after creating written pattern descriptions, to represent them in manga form for broader dissemination and sharing.

Fig. 6. Pattern Song, which is auditory expression for pattern languages (Iba, et al., 2018)

2. THREE TYPES OF PATTERN MANGA

In this paper, we introduce several types of manga representations for patterns and have created prototypes to explore this approach further (Figure 7). The first type (Type I) is "Four-frame Manga for a Pattern," which presents the content of a pattern as a short story in a four-frame format. The aim is to facilitate understanding of individual patterns. In this paper, we introduce several prototypes that depict patterns from *Learning Patterns* (Iba, et al., 2009; Iba and Sakamoto, 2011; Iba and Iba Lab, 2014a) and *Words for a Dialogue* (Iba, et al., 2017; Nagai, et al., 2017; Iba and Nagai, 2018) using this approach.

The second type (Type II) is "A Short Story Manga for a Pattern," which introduces a single pattern as a standalone short story to aim for deeper understanding of the pattern and appreciate its significance. By reading specific examples of patterns, the story is created so that readers can understand and feel what that pattern is like. In this paper, we present prototypes featuring one pattern from *Words for a Journey* (Iba and Okada, 2015a, 2015b; Iba et al., 2016a, 2016b), which is a pattern language for those with dementia and their families.

The third type (Type III) is "A Long Story Manga Including Patterns," which integrates multiple patterns within a series of stories. The goal is to provide an image of how patterns can be used in a complex and interconnected manner while promoting understanding of individual patterns. In this paper, we introduce two prototypes: the first depicts a chapter from a series in which the protagonist employs a pattern of *Fearless Change* by Mary Lynn Manns and Linda Rising (Manns and Rising, 2004); the second portrays a chapter from a

series where the protagonist adopts some patterns from *Collaboration Patterns* (Iba and Isaku, 2018; Iba and Iba Lab, 2014b).

Now, let us take a look at examples for demonstrating each type of manga as a prototype. All original pattern descriptions are provided in the Appendix.

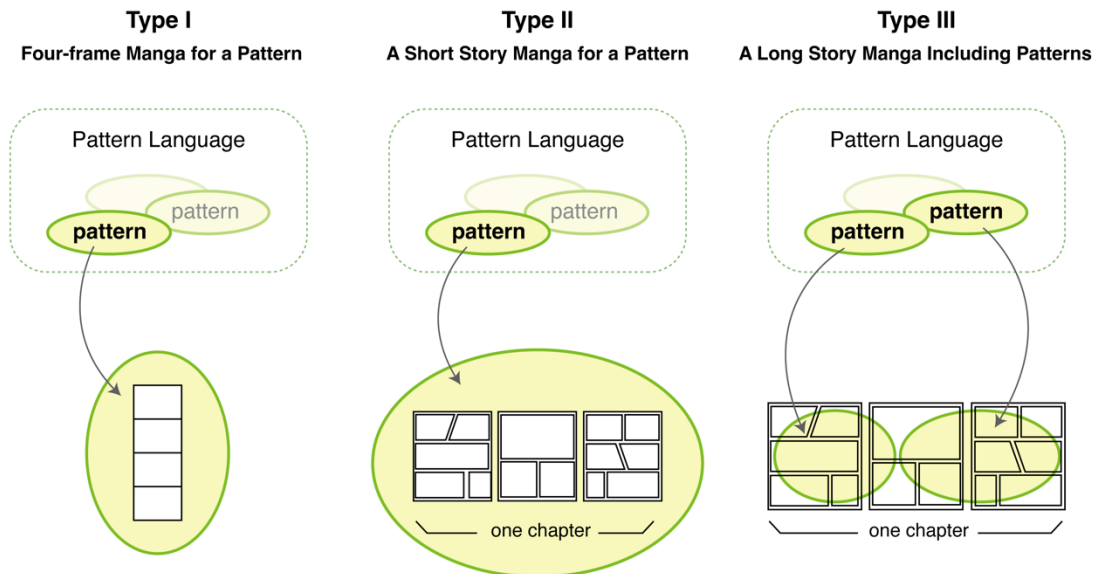

Fig. 7. Relation between pattern and manga in each type of pattern manga

3. MANGA TYPE I: FOUR-FRAME MANGA FOR A PATTERN

The first type of pattern manga aims to express the content of a single pattern, including the Context, Problem, Solution, and Consequence, in a concise four-frame manga format. Its purpose is to facilitate understanding of individual patterns. The following are prototypes of pattern manga of *Learning Patterns* and *Words for a Dialogue*.

3.1 Prototypes of Pattern Manga for *Learning Patterns*

Learning Patterns is a pattern language for creative learning (Iba, *et al.*, 2009; Iba and Sakamoto, 2011; Iba and Iba Lab, 2014a). Here, prototypes of four-frame pattern manga that depict the patterns **Tangible Growth**, **Community of Learning**, and **Language Shower** from the *Learning Patterns* are introduced. Note that these prototypes were created by Takashi Iba, one of the authors of this paper, who crafted both the story and the artwork. The dialogue in this manga was translated from Japanese to English by Sae Adachi.

3.1.1 **Tangible Growth**

A prototype of Pattern Manga for **Tangible Growth** in the *Learning Patterns* is shown in Figure 8. The synopsis of this story is as follows: The protagonist is troubled by the uncertainty of whether reading books is actually contributing to their personal growth. That is when she is told that growth is often invisible to the eye; instead, one should gauge the amount of effort put in, as that can provide a sense of empowerment. When the protagonist actually tries this approach, she begins to see the books they've read as markers of their "growth" and feels a sense of attachment to them. Suddenly, a voice calling for help is heard. Upon investigating, they find someone with a massive stack of books that is on the verge of toppling over. Astonished by the sheer volume of reading, the protagonist concludes that the individual must have experienced tremendous growth.

Tangible Growth

Fig. 8. A prototype of pattern manga for **Tangible Growth** pattern in the *Learning Patterns*

3.1.2 Community of Learning

A prototype of Pattern Manga for **Community of Learning** in the *Learning Patterns* is shown in Figure 9. The synopsis of this story is as follows: The character accompanying the protagonist advises that learning becomes deeper and more sustainable when done in the company of others. The reason, the character explains, is that going it alone makes it easier to become disheartened. Inspired by this advice, the protagonist promptly decides to organize a study group on a topic they want to learn about and creates a poster to recruit participants. The topic listed on the poster is "Everyday Life of Earthworms." The question now is, will anyone actually show up?

Community of Learning

Fig. 9. A prototype of pattern manga for *Community of Learning* pattern in *the Learning Patterns*

3.1.3 *Language Shower*

A prototype of Pattern Manga for *Language Shower* in the *Learning Patterns* is shown in Figure 10. The synopsis of this story is as follows: The protagonist, upon witnessing a friend fluently speaking a foreign language, wondered how they could become so proficient and yearned to achieve the same fluency. She learned that the method was to immerse oneself by continuously listening to radio broadcasts in that language throughout the day, akin to taking a “language shower.” Eagerly, the protagonist set out to immerse themselves in a shower.

Fig. 10. A prototype of pattern manga for *Language Shower* pattern in the *Learning Patterns*

3.2 Prototypes of Pattern Manga for *Words for a Dialogue*

Words for a Dialogue is a pattern language for practical dialogue derived from *Open Dialogue*, a form of psychotherapy, developed in Finland (Iba, *et al.*, 2017; Nagai, *et al.*, 2017; Iba and Nagai, 2018). Here, prototypes of four-frame pattern manga that depict the patterns ***Pause for Thinking*** and ***Open Question*** from *Words for a Dialogue* are introduced. Note that these prototypes were created by Ema Okubo, drawing the illustrations, and Takashi Iba, developing the story, with Sae Adachi's support to translate the dialogue in the manga.

3.2.1 ***Pause for Thinking***

A prototype of Pattern Manga for ***Pause for Thinking*** in *Words for a Dialogue* is shown in Figure 11. The synopsis of this story is as follows: The protagonist barrages his friend with questions, leaving her with no chance to speak; thus, finding himself faced with a silent interlocutor. Deciding to curb his speech, he adopts a strategy of ***Pause for Thinking***. Finally, his friend finds the opportunity to voice their thoughts.

Fig. 11. A prototype of pattern manga for ***Pause for Thinking*** pattern in *Words for a Dialogue*

3.2.2 Open Question

A prototype of Pattern Manga for **Open Question** in *Words for a Dialogue* is shown in Figure 12. The synopsis of this story is as follows: When the protagonist hears from a friend about a new cafe she visited, he eagerly asks questions, seeking specific details that pique his interest. However, his friend stumbles over the answers, stymied by the focused line of questioning. Realizing his approach may not be the best, the protagonist reshapes his question into an **Open Question**. In doing so, he allows his friend to share their unique perspective and the reasons for their fondness for the cafe.

Fig. 12. A prototype of pattern manga for **Open Question** pattern in *Words for a Dialogue*

3.3 Several Models of Composition of Four-Frame Pattern Manga

Before starting to draw four-frame manga, we thought it was best fit to allocate each frame to one of the four elements: Context, Problem, Solution and Consequence. However, it was discovered that this simplistic approach did not yield satisfactory results when actually drawing the manga.

As far as we have reflected on our practice, if we create a story by dividing the Situation, Problem, Solution and Consequence equally among the four panels, it tends to become more of an explanatory narration as if each of the four slides describing the elements are explained one by one. In this case, the core of the message becomes ambiguous, and the humorous twist does not seem to come alive.

On the other hand, in order to convey the core of the pattern succinctly in a limited number of frames, effective staging that emphasizes the contrast between the Problem and the Solution should be prioritized. By doing so, many four-panel models were created in which the Context and the Problem are integrated into one panel, or the Context is cut off, and the Problem and the Solution are quickly developed. As a result, we found four models of composition (Figure 13).

	Behavioral Change	Obedient Practitioner	Solution Idea Starting	Witness and Learn
1st frame	Context + Problematic actions In a given context, a character conducts actions that leads to a problem.	Context + Problematic situation In a given context, a problematic situation occurs.	Solution Idea A character provides an idea of important actions of a solution.	Others' Consequence Witnessing other characters achieve positive results
2nd frame	Problematic situation Problematic actions result in a problematic situation.	Solution Idea A character provides an idea of what is important to do and how to do it.	Image of Problematic situation The character provides reasons why the actions of the solution is important.	Question, implying the Problem Asking how one can achieve the same
3rd frame	Solution Idea + Actions of the Solution The character recognizes the problems from their own actions, and changes their actions.	Actions of the Solution + Story's Turn Conducting actions of the solution results in a positive outcome.	Actions of the Solution Starts doing actions of the solution.	Solution Idea + Actions A character provides guidance on how to do it
4th frame	Good consequence + Humorous twist Resulting in a positive outcome, adding a little comedic twist	Humorous twist Adding a little comedic twist for a humorous ending for the story.	Actions of the Solution + Humorous twist Finishing the actions, adding a little comedic twist for a humorous ending for the story.	Solution Idea + Starting to practice (+ Humorous twist) Learning the method and deciding to give it a try

Fig. 13. Several models of embedding a pattern content in four-frame manga format

The first model is what we call “Behavioral Change,” which is as follows:

- [Behavioral Change]
- 1st Frame: Context +Problematic actions (In a given context, a character conducts actions that leads to a problem)
2nd Frame: Problematic situation (Problematic actions result in a problematic situation)
3rd Frame: Solution Idea + Actions of the Solution (The character recognizes the problems from their own actions, and changes their actions)
4th Frame: Good consequence + Humorous twist (Resulting in a positive outcome, adding a little comedic twist)

The key point of this structure is that the problem is included in the first frame, and the second frame represents the stage of realization. In this case, the protagonist realizes the problem themselves, but it could also be someone else pointing it out in the second frame. By including the frame where the problem is recognized, it prevents the solution in the third frame from occurring abruptly, which would confuse the readers. To maintain the coherence of the story, it is important to have the frame of problem recognition in the second position. As a result, to fit the entire pattern into four frames, the first frame combines both the situation and the problem. This is crucial for condensing a pattern into a comprehensible four-frame format. This model is well-suited for patterns where the protagonist's actions lead to a problem, and by altering those actions, there is a favorable outcome.

The prototypes of pattern manga for *Pause for Thinking* (Figure 11) and *Open Question* (Figure 12) of *Words for a Dialogue* represents this “Behavioral Change” model.

The second model is what we call “Obedient Practitioner,” which is as follows:

[Obedient Practitioner]

1st Frame: Context + Problematic situation (In a given context, a problematic situation occurs)

2nd Frame: Solution Idea (A character provides an idea of what is important to do and how to do it)

3rd Frame: Actions of the Solution + Story’s Turn (Conducting actions of the solution results in a positive outcome)

4th Frame: Humorous twist (Adding a little comedic twist for a humorous ending for the story)

In this model, the protagonist finds themselves in a problematic situation in the first frame. Another character observes this and offers a solution idea in the second frame, which the protagonist dutifully executes in the third frame. While the story could easily conclude with a happy ending at this point, a narrative “turn” is often introduced to inject humor into the manga, culminating in a punchline in the fourth frame. This model is particularly suitable for scenarios where the problem doesn’t arise from any specific actions taken by the protagonist; rather, they naturally find themselves entangled in a problematic situation.

The prototypes of pattern manga for *Tangible Growth* (Figure 8) of *Learning Patterns* represents this “Obedient Practitioner” model.

The third model is what we call “Obedient Practitioner,” which it is as follows:

[Solution Idea Starting]

1st Frame: Solution Idea (A character provides an idea of important actions of a solution)

2nd Frame: Image of Problematic situation (The character provides reasons why the actions of the solution is important)

3rd Frame: Actions of the Solution (Starts doing actions of the solution)

4th Frame: Actions of the Solution + Humorous twist (Finishing the actions, adding a little comedic twist for a humorous ending for the story)

In this model, the narrative begins directly by imparting a crucial advice, Solution. Unlike the pattern where a problem occurs and then a solution is sought, the first frame here starts with a declaration that “This is important,” followed by an explanation or rationale in the second frame. The protagonist then attempts to put this into practice in the third frame. While the fourth frame could depict the outcome, it is often already implied within the story, so the ending typically features a humorous twist as the punchline. This structure is versatile and can accommodate various kinds of patterns. However, it may be particularly well-suited for scenarios where the advice is universally applicable, as opposed to specific problem-solving. In this model, the solution is emphasized as a key insight from the very first frame, it leaves an immediate impression on the reader.

The prototypes of pattern manga for *Community of Learning* (Figure 9) of *Learning Patterns* represents this “Solution Idea Starting” model.

The fourth models what we call “Witness and Learn,” which is as follows:

[Witness and Learn]

1st Frame: Others’ Consequence (Witnessing other characters achieve positive results)

2nd Frame: Question, implying the Problem (Asking how one can achieve the same)

3rd Frame: Solution Idea + Actions (A character provides guidance on how to do it)

4th Frame: Solution Idea + Starting to practice (+ Humorous twist) (Learning the method and deciding to give it a try)

In this model the protagonist witnesses others succeeding in a scene (the Consequence of the pattern) and ponders or inquires about how to achieve similar results. They then learn the approach (Solution Idea) and its specific methods (Actions) and contemplate trying it out for themselves. The third and fourth frames can be used to show the Solution, allowing for both an abstract level and a detailed level, or a depiction of the actual method alongside metaphors. Especially when the pattern name includes a metaphor, illustrating that metaphor can make the portrayal more impactful.

The prototypes of pattern manga for *Language Shower* (Figure 10) of *Learning Patterns* represents this “Witness and Learn” model.

We here have introduced four models; however, we do not assert that they are the only possible structures and compositions for a four-frame manga. Instead, we aim to present models that we have identified, which outlines the models of compositions that can constitute a four-frame manga naturally. While four-frame manga can be serialized, adhering to the same structure and composition across installments could lead to monotony, causing readers to lose interest. To achieve narrative diversity, it is important to have a variety of models, and it would be beneficial to continue expanding this assortment of variations in the future.

4. MANGA TYPE II: A SHORT STORY MANGA FOR A PATTERN

The second type introduces a single pattern as a complete story in one chapter to aim for deeper understanding of the pattern and appreciate its significance. By reading specific examples of patterns, the story is created so that readers can understand feel what that pattern is like. In what follows, we present a prototype featuring one pattern from *Words for a Journey*, which is a pattern language for those with dementia and their families.

4.1 A Prototype of Pattern Manga for *Words for a Journey*

Words for a journey is a pattern language for living well with dementia, consisting of 40 patterns for those with dementia and their families, and others in their community (Iba and Okada, 2015a, 2015b; Iba *et al.*, 2016a, 2016b). Here, we present a prototype of pattern manga focusing on ***Preparation for the Dream*** from the patterns.

A prototype of Pattern Manga for ***Preparation for the Dream*** is shown in Figure 14-18. Note that this prototype was created by Hiroaki Tanaka, one of the authors of this paper, who crafted both the story and the artwork, and dialogue in this manga was translated into English by Sae Adachi.

The synopsis of this story is as follows: The protagonist, living with her husband who has been diagnosed with dementia, discovers a pile of Hokkaido travel brochures in his room. He had always expressed a desire to visit Hokkaido, but prioritizing work, they never made the trip. Seeing these brochures, the protagonist realizes that despite his dementia, her husband's longing to travel to Hokkaido remains unchanged. However, considering her husband's propensity to get lost, she fears that a trip might be challenging. During one of her chats with those with dementia and their families, she brings up the idea of the Hokkaido trip. Those present, both those with dementia and their families, share how they make ***Preparation for the Dream***, striving towards the realization of what they want to do and embracing life positively despite dementia. Inspired by their stories, the protagonist decides to abandon her preconceived notion of 'impossibility.' She starts researching about those who have managed to make trips a reality despite dementia. This newfound determination reignites her resolve, prompting her to face her husband anew, and together, they begin to make strides towards making their dream come true.

Fig. 18. A prototype of pattern manga for *Preparation for the Dream* pattern in *Words for a Journey* – page 9-10

4.2 Analysis on Composition of the Prototype

In pattern manga, the elements of a pattern, namely, Context, Problem (+Forces), Solution (+Actions) and Consequences, are expanded into a specific storyline². Then, how does the abstract description of the pattern correspond to the concrete storyline development of the pattern manga?

Figure 19 shows the correspondence between the items of the pattern and the story of the pattern manga. In this figure, the Context is colored in light blue, the Problem (+Forces) in gray, the Solution (+Actions) in orange, and the Consequence in yellow. By visualizing in this way, we can confirm how much volume (number of pages) is allocated to the content of each item of the pattern in the story development of the manga.

In the case of this prototype, the introduction of the story, which is the Context, and the presentation of the Problem (+Forces) are contained within two pages each. Moreover, more than five pages are devoted to the part of Solution (+Actions), which is about problem-solving, and less than one page to the part of Consequence, where changes resulting from the implementation of Solution (+Actions) can be felt.

Upon further analysis, what is interesting is that more than half of the total page count is allocated to conveying the Solution (+Actions). If the main theme of the pattern manga is to demonstrate the Solution (+Actions) to the problems that arise in specific context, it would be natural to allocate many pages to Solution (+Actions). This is probably because, in contrast to the Context, Problem (+Forces), and Consequence, which depict a state, Solution (+Actions) includes a sequence of actions unfolding over time, as well as the depiction of changes in thought and emotion along the actions.

In the case of this prototype, the part that expresses Solution (+Actions) can be largely divided into two halves. The first half is a scene where the protagonist understands the content of the Solution (+Actions) by receiving advice from others, and the second half is a scene where the protagonist practices the Solution (+Actions) himself.

² While beyond the scope of this paper for a detailed discussion, it is intriguing to note that these components of a pattern can be easily mapped to narrative structures, including the three-act structure commonly used in Hollywood.

The climax of the story is the latter scene, where the protagonist takes actions based on advice received from a person with dementia and their families. In this pattern manga, a positive change (Consequence) resulting from practicing the Solution (+Actions) is depicted on the last page, aiming to encourage readers to practice just like the protagonist.

This analysis pertains to this prototype, and we do not know if it applies universally to other patterns and pattern manga. With more prototypes and analysis, we may be able to find a pattern in how much of the pattern manga makes up each part of a pattern.

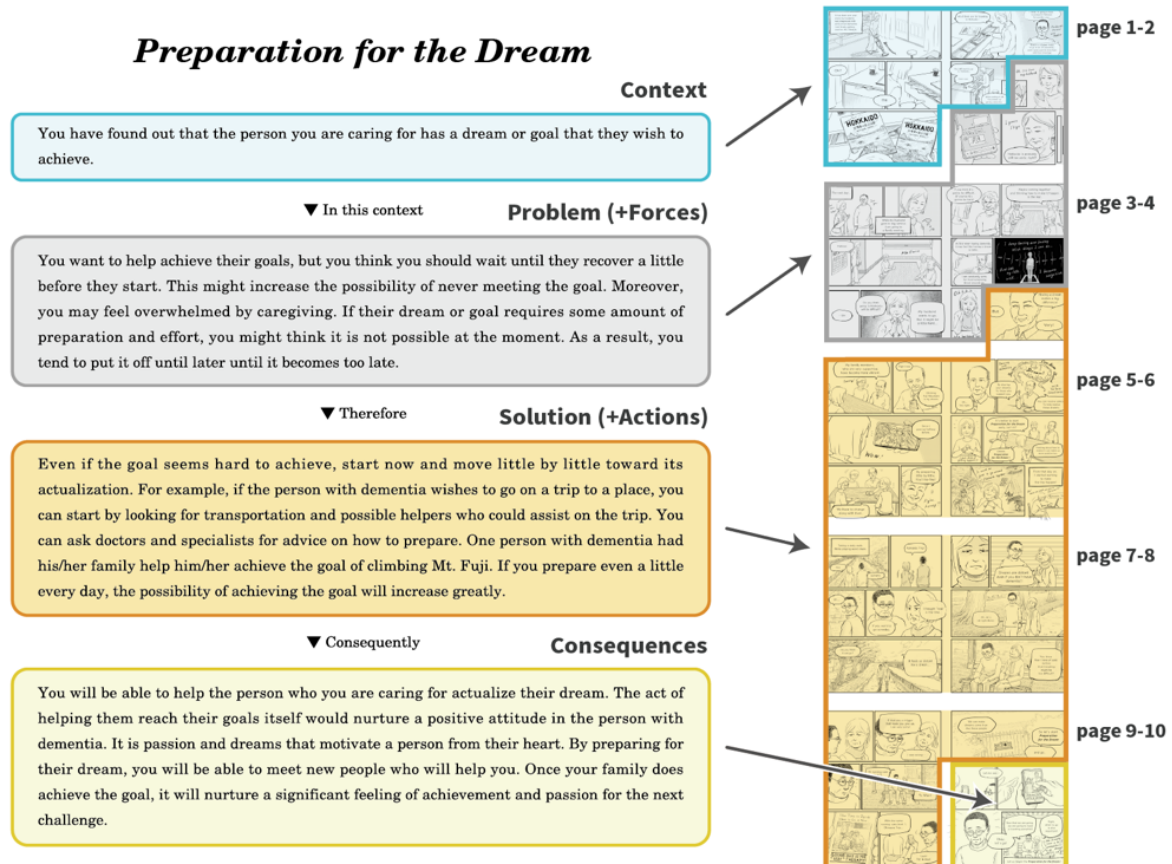

Fig. 19. Correspondence between the pattern elements and the prototype pattern manga for *Preparation for the Dream*

5. MANGA TYPE III: A LONG STORY MANGA INCLUDING PATTERNS

The third type involves incorporating multiple patterns that emerge within a series of practices of one whole story. The goal is to provide an image of how patterns can be used in a complex and interconnected manner while promoting understanding of individual patterns.

Here, we present two prototypes of each from *Fearless Change* and *Collaboration Patterns*. These two are chapters within a long story series and both fall under Type III. However, in the first prototype, only one pattern is introduced, while in the second prototype, several patterns are introduced (see Figure 20). The number of patterns appearing in a single chapter is not an essential point. Yet, a story in which only one pattern appears resembles Type II, which is why we particularly wish to discuss it explicitly here. In the case of Type II, the emphasis is on the pattern, and the story is constructed to maximize its effectiveness. In contrast, in Type III, when only one pattern is present, the emphasis is on the broader story that includes subsequent chapters, and patterns are introduced as needed to support that story. At first glance, they may seem identical, but there is this distinction in their relationship with the patterns.

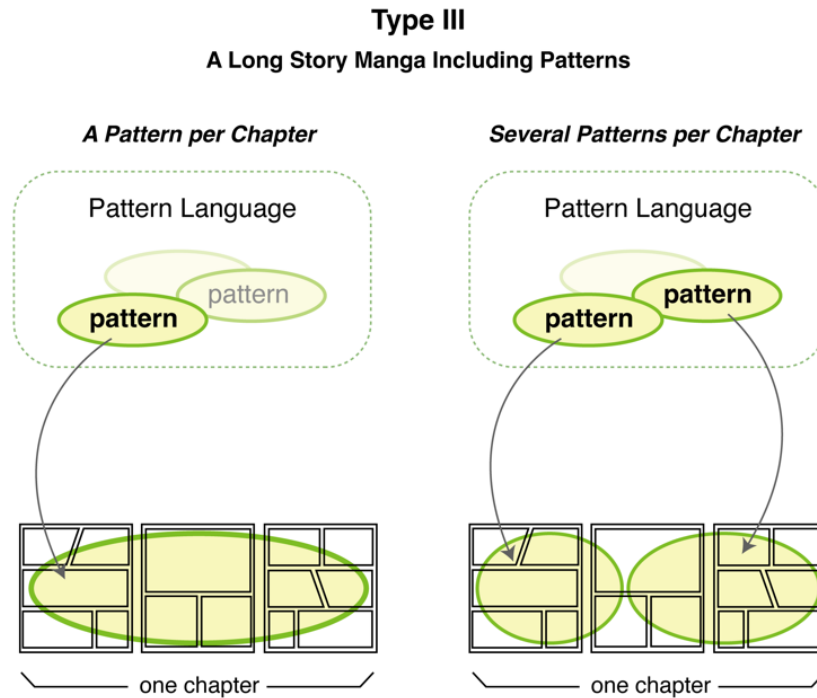

Fig. 20. Correspondence between the pattern elements and the prototype pattern manga for **Preparation for the Dream** pattern in *Words for a Journey*

5.1 A Prototype of Pattern Manga for *Fearless Change*

Fearless Change is a pattern language for introducing new idea to an organization, which is written by Mary Lynn Manns and Linda Rising, consisting of originally 48 patterns in *Fearless Change* book (Manns and Rising, 2004) and 15 patterns in *More Fearless Change* book (Manns and Rising, 2015). We pick up a key pattern **Evangelist** from the patterns to demonstrate pattern story manga.

A prototype of Pattern Manga for **Evangelist** in *Fearless Change* is shown in Figure 21-28. Note that this prototype was created by the authors of this paper, with Mizuki Ota and Takashi Iba developing the story and Mizuki Ota drawing the illustrations, and the dialogue in this manga was translated into English by Mizuki Ota.

The synopsis of this story is as follows: The protagonist is a young company employee. A new Innovation Planning Department is established within the company, and the protagonist is handpicked to join. After considering various options, the protagonist proposes the introduction of Pattern Language of Practices to transform internal communication in a creative way. However, despite presenting the idea, it is not well-received nor understood by superiors and colleagues, causing frustration. Then, a close colleague from the company comes to the rescue and introduces the concept of becoming an Evangelist for the idea they want to promote. With this advice in mind, the protagonist decides that in the next meeting, they will have everyone to experience the benefits of pattern language by engaging in dialogue using pattern cards. As a result, the superiors and colleagues begin to grasp its value, leading to its introduction into their own departments.

5.2 A Prototype of Pattern Manga for Collaboration Patterns

Collaboration Patterns is a pattern language for creative collaboration, consisting of 34 patterns (Iba and Isaku, 2018; Iba and Iba Lab, 2014b). Here, we present a prototype of pattern manga focusing on patterns from the patterns such as **Create a Legend**, **Chaotic Path to Breakthrough**, and **Ideas Taking Shape**.

A prototype of Pattern Manga for *Collaboration Patterns* is shown in Figure 29-34. Note that this prototype was created by the authors of this paper, with Takashi Iba developing the story and Urara Tajima drawing the illustrations, and dialogue in this manga was translated into English by Sae Adachi.

The synopsis of this story is as follows: The protagonists, who are high school students, decide to organize the school festival in a new and unprecedented style, aiming to Create a Legend with a groundbreaking project as it is their last festival before graduation. However, when they actually begin preparations, they encounter difficulties like never before, plunging them into chaos. Some of the other students even suggest that maybe they should just go back to the traditional way. During this time, a friend introduces a concept (pattern) called **Chaotic Path to Breakthrough**. It suggests that any creative endeavor will inevitably lead to a state of chaos, and by enduring and persisting through this, a breakthrough will occur. Hearing this, the protagonist decides to try a little harder.

In the next meeting, the protagonist talked about **Chaotic Path to Breakthrough** and, after thinking a bit more, came up with a fantastic idea of involving children. The protagonist suggested creating posters to invite children, but it seemed that other team members were not quite enthusiastic about the idea. Therefore, recognizing the importance of **Ideas Taking Shape**, the protagonist decided to quickly sketch out the poster concept. When the finished poster was presented, the other team members understood the idea, and they proceeded to put up the posters around the town. Now, the question remains whether the children will be interested in the event.

5.3 Analysis on Composition of the Prototype

5.3.1 Composition of the Prototype of Pattern Manga for *Evangelist*

Here, we will consider the structure of manga for Fearless Change where only one pattern appears in a single chapter. When there is one pattern per chapter, we can correlate the narrative structure with the pattern description, similar to Type II, Preparing for Dreams.

Figure 35 illustrates the relationship between the Evangelist pattern elements and the storyline of the pattern manga. The color coding of the elements is the same as in Figure 19, with Context in light blue, Problem (+Forces) in gray, Solution (+Actions) in orange, and Consequences in yellow.

This prototype consists of 15 pages in total. Three pages are dedicated to the Context, which serves as the introduction to the story. Two pages are allocated for presenting the Problem (+Forces), and eight pages depict the description of the Solution (+Actions) for resolving the problem. Finally, two pages illustrate the Consequences of the actions taken.

In this context, two commonalities were identified with this manga and Preparation for the Dream manga. One is the allocation of a significant number of pages to the Solution (+Actions) throughout the entire story. The other is that the scenes representing the Solution (+Actions) are composed of both scenes for coming to know of the pattern and practicing the pattern.

In the prototype for the Evangelist, it is evident that there are three pages for scenes about coming to know of the pattern, while there are five pages for scenes about practicing the pattern. This may be influenced by the nature of the story where the actions taken to resolve the Problem + Forces faced by the protagonist also bring about changes in the Problem + Forces of their superior and the organization. In other words, the meticulous depiction of not only the protagonist's but also the changes in the emotions and thoughts of the superior over time necessitated a higher page count.

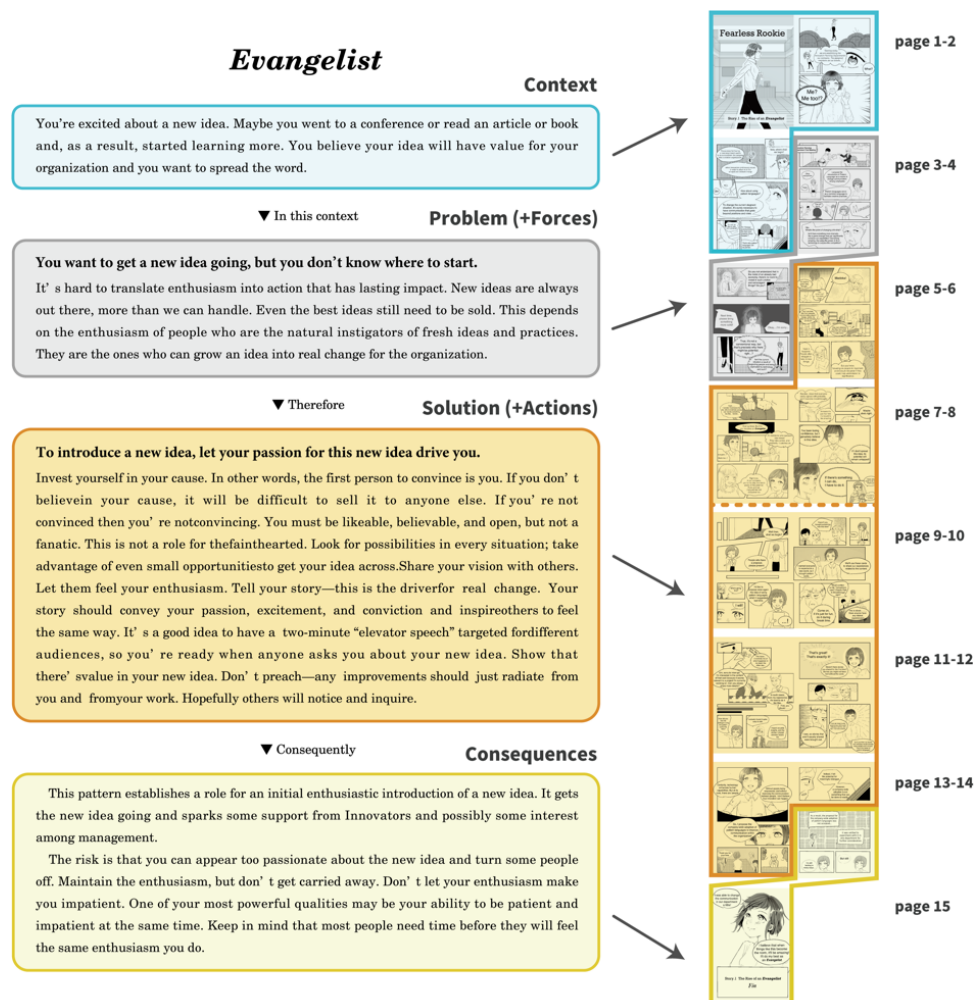

Fig. 35. Correspondence between the items of the pattern and the story of the pattern manga in the case of a prototype for *Evangelist* pattern in *Fearless Change*

In this way, it becomes clear that in story manga, the situations and psychological depictions of characters allow readers to have a pseudo-experience of learning and practicing the pattern. On the other hand, as mentioned at the beginning of this section, in Type III when there is only one pattern, the focus is on a larger story that includes subsequent chapters, and patterns are introduced as needed. This premise sets Type III apart from Type II.

5.3.2 Composition of the Prototype of Pattern Manga for Collaboration Patterns

Here, we will consider the composition of a pattern manga where three patterns are introduced in a single chapter. When dealing with patterns individually, as we have already shown, we were able to align the elements of a pattern (Context, Problem, Solution, Consequence) with the narrative structure of the manga. However, when dealing with multiple patterns, it is not a one-to-one correspondence between pattern elements and the narrative structure. So, how are the patterns incorporated into the narrative?

Figure 36 illustrates the correspondence between the story's narrative structure (introduction, development, turning point, conclusion) of the prototype presented earlier and the frames where patterns are introduced. Similar to Figure 19, the introduction is represented in blue, development in gray, turning point in orange, and conclusion in yellow. Additionally, frames with pattern introductions are emphasized using the colors of the narrative structure. By looking at this figure, it becomes evident that there is one pattern introduction frame for each of the introduction, development, and turning point phases.

However, upon closer examination of the turning point phase, it becomes clear that two patterns are being addressed. The first half depicts the practice of Chaotic Path to Breakthrough, while the second half depicts the practice of Ideas Taking Shape. In summary:

Introduction - **Create a Legend** (Recollection -> Problematic Situation)
 Development - **Chaotic Path to Breakthrough** (Understanding)
 Turning Point 1 - **Chaotic Path to Breakthrough** (Practice)
 Turning Point 2 - **Ideas Taking Shape** (Practice)
 Conclusion - Towards a Positive Outcome

Figure 37 provides a clear illustration of the relationship between the patterns being addressed and the story. It can be seen from this figure that the story focuses prominently on the Chaotic Path to Breakthrough, and is the only pattern that has both scenes of coming to know of the pattern and practicing the pattern depicted by the protagonist.

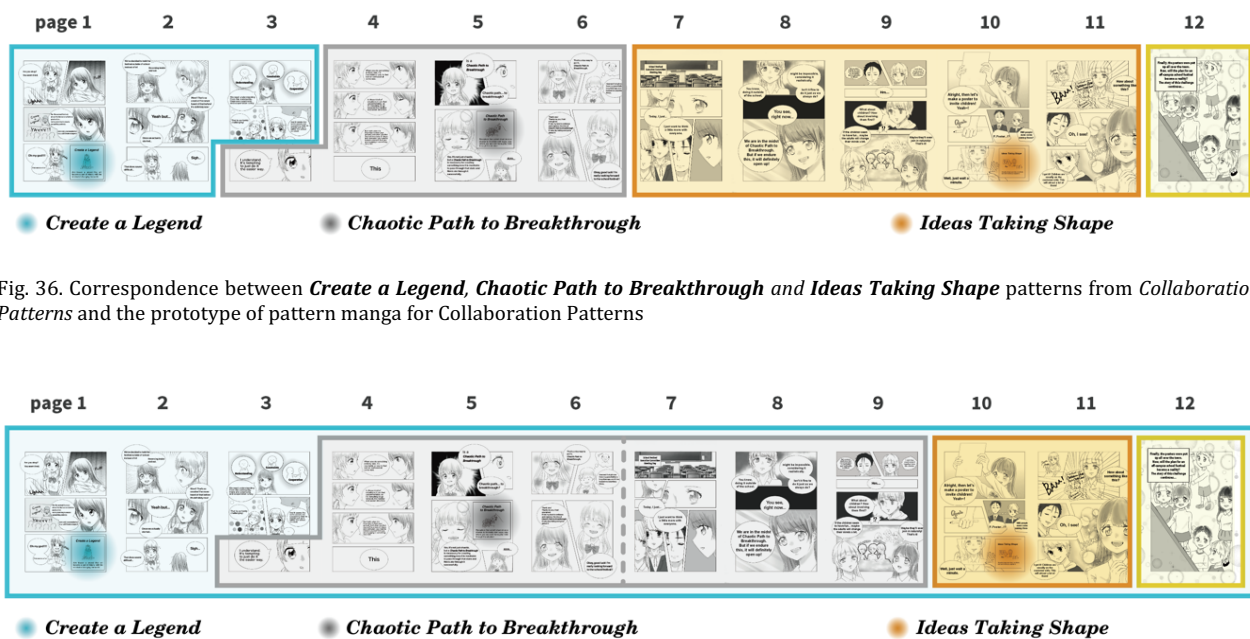

Fig. 36. Correspondence between **Create a Legend**, **Chaotic Path to Breakthrough** and **Ideas Taking Shape** patterns from *Collaboration Patterns* and the prototype of pattern manga for Collaboration Patterns

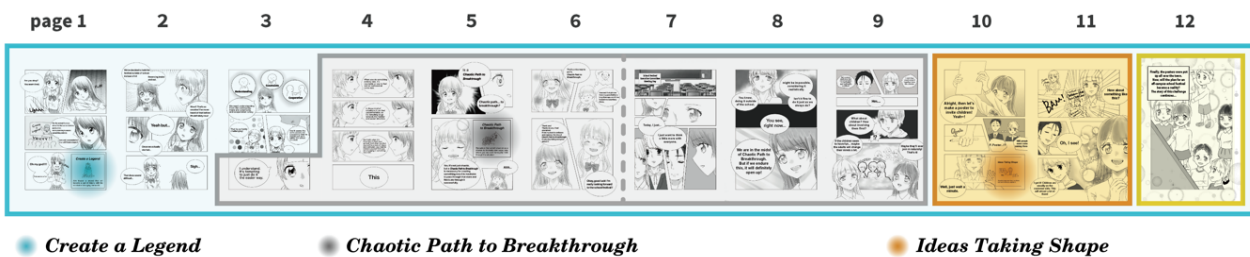

Fig. 37. Relationship between **Create a Legend**, **Chaotic Path to Breakthrough** and **Ideas Taking Shape** patterns from *Collaboration Patterns* and the prototype of pattern manga for Collaboration Patterns

Next, let us confirm the position of the patterns in the overall structure of Collaboration Patterns (Figure 38). In Collaboration Patterns, Creative Collaboration serves as the core (No.0), with highly abstract Core Patterns (No.1-3) and more specific patterns (No.4-33) providing detailed approaches.

In this prototype, the high-level pattern Create a Legend (No.3) is introduced as the premise of the story, and the practices corresponding to Chaotic Path to Breakthrough (No.18) and Ideas Taking Shape (No.19) are specifically depicted. Thus, patterns of different levels are used within a single story, which is quite intriguing.

In a manga that deals with multiple patterns, it is plausible that related patterns are introduced sequentially. However, as in this prototype, it is also possible that (1) patterns with different levels of perspective are combined, (2) patterns of wider perspective are integrated into the problem situation that serves as the premise of the story, and (3) more specific patterns become the central focus of the story. This suggests that fundamental patterns or patterns indicating broader directions set the premise for the story, followed by specific practices within that context. In this prototype, this is indeed the case.

It is important to note that this analysis pertains to one specific prototype created in this instance and may not be universally applicable. Further exploration is needed after creating pattern manga that deals with multiple patterns to confirm these findings.

Later, around 350 years ago (late 17th century), a revised version of a book teaching Buddhist doctrines incorporated a six-page section with humorous illustrations. In the section, “1. satirical elements and comical scenes, 2. prominent (skeletons of) characters, 3. dialogue inclusion (later known as speech balloons), and 4. frame divisions” (Sawamura, 2022, p.26) exhibited manga-like expressions. Additionally, the globally acclaimed *ukiyo-e* prints also began around the same period in the late 17th century. *Ukiyo-e* prints are also known for their “imaginative and unrestricted depictions, containing numerous manga-like expressions” (Sawamura, 2022, p.28).

Then, around 200 years ago (early 19th century), Hokusai Katsushika (1760-1849), famous for his *ukiyo-e* prints such as “Thirty-Six Views of Mount Fuji”, drew a picture book called “Hokusai Manga”, where the term “manga” was introduced. The word “*manga*” derives from the term “*man*,” meaning “as one pleases,” and Hokusai referred to his casually drawn pictures as “*manga*.” Hokusai also described his “Hokusai Manga” as “pictures drawn aimlessly as one pleases.”

The book featured lively depictions of townspeople, warriors, landscapes, and plants, capturing everyday life with an eye that resonates with modern manga. Additionally, the humorous expressions often portrayed in contemporary *ukiyo-e* prints also connect to the entertainment and humor found in manga today. The artistic style emphasized frame divisions and narrative storytelling. Due to these factors, Hokusai is sometimes referred to as the “First Manga Master”.

In the 20th century, manga appeared in newspapers initially as political and social satires, but they soon expanded into entertainment for the general public. During this process, techniques that are now characteristic of modern manga, such as frame layout, speech balloons, and consistent character designs, were established. During this period, there were also serialized works in newspapers and magazines that depicted the lives of ordinary people as story manga, gaining popularity.

After the Great Kanto Earthquake in 1923, it is said that manga played a role in comforting the hearts of the common people. The newspaper industry was also affected by the disaster and had to start over, but “Making the restart from the earthquake as an opportunity, each newspaper worked on refreshing their page layouts. Manga was considered one of the selling points due to its popularity among readers, and as a result, the format of ‘4-koma’ (four-frame manga) with daily serialization became commonplace in newspapers” (Sawamura, 2022, p. 53).

In this way, manga can be seen as an expression that is deeply intertwined with the era it belongs to, rather than just stories of imaginary worlds. While being tied to the times, manga also possesses entertainment value, which is one of its defining features. The book *Nihon Manga Zenshi (The Complete History of Japanese Manga)* points out that manga “has constantly pursued entertainment value, wit, and joy, skillfully capturing the customs of the times while incorporating satirical elements,” and as a result, “popularity and high culture go hand in hand, becoming an integrated whole” (Sawamura, 2022, p.16-17).

Based on the above, this paper aims to summarize the characteristics of manga in the following three points:

- (1) Relevance to the times (timeliness)
- (2) A perspective on everyday life (everydayness)
- (3) Fun and humor (entertainment value)

When it comes to expressing pattern language through manga, it is acceptable to simply use manga as a means of expression; however, if one wishes to inherit these characteristics of manga, pattern manga can be considered as one style within the realm of manga.

If we take the pattern manga for *Words for a Journey* as an example, there is (1) relevance to the times (timeliness) in the sense that it represents one of the societal characteristics symbolizing the present era, where it is currently said to be “The Age of Eight Million People with Dementia” in Japan’s aging society. Also, *Words for a Journey* focuses on the lives of individuals with dementia and their families, truly capturing the essence of daily life, thus giving (2) a perspective on everyday life (everydayness). As for (3) fun and humor (entertainment value), while the pattern language itself may not be strong in this aspect, when transformed into a pattern manga, it becomes an engaging and enjoyable story of one family’s heartwarming challenges.

In the pattern manga of *Collaboration Patterns* the (1) relevance to the times (timeliness) is relatively weak; however, one could argue that it can be seen as a reaction to the repetition of similar events in a stagnant society. For (2) a perspective on everyday life (everydayness) revolves around the daily life of teenagers in school. The

(3) fun and humor (entertainment value) arise from the idea of holding a school festival outside of school, which may seem reckless, but the anticipation of where the concept will lead captures the readers' interest.

In the pattern manga of *Words for a Dialogue* and *Learning Patterns* follows the structure of a comedic four-frame manga, and a slightly humorous punchline is depicted at the end. It can be said that it exhibits (3) fun and humor (entertainment value) characteristic. When it comes to pattern manga, if the humor is overly emphasized and overshadows the content of the pattern, it becomes counterproductive, as the essence of the pattern may be overshadowed, so, it is necessary to have a soft punchline that doesn't overshadow the content of the pattern but still elicits laughter.

Overall, we can see that pattern manga are a good way to present specific scenarios. Also, in addition to and different from traditional pattern descriptions or explanatory text, pattern manga can be a new way to communicate crucial messages patterns convey. If the pattern can be reached to a more general audience, no matter the method, the message can be spread even more.

7. CONCLUSION

In this paper, we presented a method of expressing and communicating pattern languages through manga, different from text, and presented a prototype to illustrate this approach. In Japan, manga have permeated society from children to adults, making it arguably the most widely consumed media.

Moreover, as is well known, Japanese manga, along with animation, have spread throughout the world. These observations highlight the power of manga to reach people and their approachability. Currently, various themes are being introduced through manga with titles like *Understanding ***** through Manga*, leveraging these strengths. Examples include organizational learning, SDGs management, design thinking, problem-solving, Drucker's management theory, Adlerian psychology, active listening techniques, and natural farming, among others.

Considering these trends in manga, we realized that pattern languages have traditionally been conveyed solely through serious expressions for serious content. However, we wondered if it would be possible to deliver serious content in a more approachable and enjoyable manner. In this paper, we demonstrated such an attempt by actually creating prototype manga. It should be noted that all the authors were beginners in drawing manga, and this was our first endeavor in this field. Also, the pattern manga types and patterns expressed were not selected with any criteria but coincidentally, and we believe any pattern can be expressed in any manga type or format.

The manga presented in this paper is available as *Pattern Magazine Vol. 1* on our website³ (Figure 39). What we have presented here is merely a beginning. In the future, as we continue to create pattern manga, we hope to invite other pattern language creators to explore the possibilities of collaborating with manga and raise awareness among manga creators about the potential of pattern languages.

ACKNOWLEDGMENT

We would like to express my gratitude to Ema Okubo, a project member in Iba Lab, who, although not a co-author of this paper, collaborated in drawing the manga and allowed its prototype to be included in this paper. Also, we extend our gratitude to, YC Cheng, our shepherd, for providing valuable feedback on this paper. Finally, we sincere appreciate the participants of the Writers' Workshop: Neil Harrison, Mary Tedeschi, Charlie Danoff, and Sridevi Ayloo for their valuable feedback and encouragements on this paper.

APPENDIX

A.1 Original Pattern Description of *Tangible Growth*

The content of *Tangible Growth* pattern in *the Learning Patterns* is as follows (Iba and Iba Lab, 2014a):

Tangible Growth

You don't grow in a day.

You need to continue practicing for *Skill Embodiment* or taking a *Language Shower*.

▼In this context

It is not easy to keep yourself motivated to learn.

- It takes a long time before you realize the effect of learning.
- It is difficult to maintain your motivation to work hard.

▼Therefore

Record your learning activities so you can reflect on your path and improve. Underline passages and write notes when reading books, set out the books and papers you've read, or hang your own work on the wall. Sometimes, look back at your learning path to realize how your knowledge and skills have grown.

A.2 Original Pattern Description of *Community of Learning*

The content of *Community of Learning* pattern in *the Learning Patterns* is as follows (Iba and Iba Lab, 2014a):

Community of Learning

Two heads or more are likely better than one.

You want a good command of a foreign language.

▼In this context

Mastering languages is difficult.

- The sense of a language is affected by the nature and culture where it is used.
- Expressions enable you to convey what you want to say.
- It takes a long time to master a language.

▼Therefore

Establish an environment where you can always listen to and read a foreign language. If you want to master a foreign language, establish your environment — for example using mobile media — to continue listening to and reading it. Then, make rules to use the language every day, for example, listen to an online radio broadcast or audio book in the background. Physically recording your learning activities as *Tangible Growth* (5) is a good way to maintain your motivation.

A.4 Original Pattern Description of *Pause for Thinking*

For reference, let us include the content of the *Pause for Thinking* pattern of *Words for a Dialogue* (Iba and Nagai, 2018):

Pause for Thinking

Wait for words to be born.

You asked the other a question about themselves.

▼In this context

When they do not respond to you right away, you may want to change topics or reword your question, but this may intercept their thoughts and words as they are forming. If you do not get an answer right way, you may think that they did not understand your question and try to rephrase it. But the deeper the question makes them reflect, the more time they need to think and put their thoughts into words.

▼Therefore

Wait for them to think and gather their thoughts into words. The Silence after asking a question is not something meaningless. Rather, it is time for them to recall their past experiences and feelings, and search for the words to express them. Trying to rush their answer would disrupt this time. You should relax and wait with them until they are ready to respond.

▼Consequently

Instead of simply saying what they already knew, they will be able to look back at their experience, see it in a new light and find the words to talk about it. In this way, not only will the dialogue about their **Experienced World** expand, but the other will also gain an opportunity to redefine their **Experienced World**.

A.5 Original Pattern Description of **Open Question**

The content of **Open Question** pattern in *Words for a Dialogue* is as follows (Iba and Nagai, 2018):

Open Question

Questions that open the other person's mind and make them think.

You want to ask questions to hear the other person's story.

▼In this context

If you ask closed questions where their response is limited to what you can think of, it will be difficult for them to express their true feelings. People use questions when trying to understand another person. However, if you ask questions that limit them to 'yes' or 'no' responses or ask questions that offer a limited choice from multiple answers, you can never expand the dialogue beyond your imagination. You should try to reach the raw thoughts and feelings that they have never released.

▼Therefore

Ask open questions that make it easier for them to freely express themselves. When initiating a dialogue, you should begin with an open question such as 'How do you want us to spend this time?'. When they are talking about their experience, you should keep asking questions such as 'When did that happen?', 'What did you feel when that happened?' and 'What happened next?'. In this manner, they can maintain focus on their experience and deeply discuss it.

▼Consequently

It becomes easier to deepen the understanding of their 'Experienced World' by generating an environment where the person can speak freely and discuss things that they find important. This makes the other person feel that they can take initiative to deepen the dialogue by talking about what they want without being limited to what they are asked.

A.6 Original Pattern Description of *Preparation for the Dream*

The contents of *Preparation for the Dream* pattern in *Words for a Journey* is as follows (Iba and Okada, 2015b):

Preparation for the Dream

A quick first action becomes the shortcut to actualization.

You have found out that the person you are caring for has a dream or goal that they wish to achieve.

▼ In this context

You want to help achieve their goals, but you think you should wait until they recover a little before they start. This might increase the possibility of never meeting the goal. Moreover, you may feel overwhelmed by caregiving. If their dream or goal requires some amount of preparation and effort, you might think it is not possible at the moment. As a result, you tend to put it off until later until it becomes too late.

▼ Therefore

Even if the goal seems hard to achieve, start now and move little by little toward its actualization. For example, if the person with dementia wishes to go on a trip to a place, you can start by looking for transportation and possible helpers who could assist on the trip. You can ask doctors and specialists for advice on how to prepare. One person with dementia had his/her family help him/her achieve the goal of climbing Mt. Fuji. If you prepare even a little every day, the possibility of achieving the goal will increase greatly.

▼ Consequently

You will be able to help the person who you are caring for actualize their dream. The act of helping them reach their goals itself would nurture a positive attitude in the person with dementia. It is passion and dreams that motivate a person from their heart. By preparing for their dream, you will be able to meet new people who will help you. Once your family does achieve the goal, it will nurture a significant feeling of achievement and passion for the next challenge.

A.7 Original Pattern Description of *Evangelist*

Evangelist pattern in *Fearless Change* offers “To begin to introduce the new idea into your organization, do everything you can to share your passion for it” (Manns and Rising, 2004). The solution of the pattern is described as follows:

“To introduce a new idea, let your passion for this new idea drive you.

Invest yourself in your cause. In other words, the first person to convince is you. If you don’t believe in your cause, it will be difficult to sell it to anyone else. If you’re not convinced then you’re not convincing. You must be likeable, believable, and open, but not a fanatic. This is not a role for the

fainthearted. Look for possibilities in every situation; take advantage of even small opportunities to get your idea across.

Share your vision with others. Let them feel your enthusiasm. Tell your story—this is the driver for real change. Your story should convey your passion, excitement, and conviction and inspire others to feel the same way. It's a good idea to have a two-minute "elevator speech" targeted for different audiences, so you're ready when anyone asks you about your new idea. Show that there's value in your new idea. Don't preach—any improvements should just radiate from you and from your work. Hopefully others will notice and inquire." (Manns and Rising, 2014)

A.8 Original Pattern Description of *Create a Legend*

The contents of *Create a Legend* pattern in *Collaboration Patterns* is as follows (Iba and Iba Lab, 2014b):

Create a Legend

A project whose story will be passed down to the next generation.

The team is working on their project.

▼ In this context

The project will be absorbed by all other events that are going on and will not remain in people's minds.

- New products are being produced every day.
- To stand out in the world, "good" is not good enough.
- Impact is needed to leave an impression on someone's mind.

▼ Therefore

Aim toward a project that will become a part of history, with the mindset of changing the world. Mere completion of the product is not the goal. Work out every last detail and attract the minds of people. Let the project become a legend that will be told to future generations.

▼ Consequently

The project will be able to produce a new value that no one has ever thought of. It will have a strong impact on people and will be recognized long into the future. These legends will trigger people in the next generation to also work toward a significant goal, and the people involved in the project will also become legends and models for future creators.

A.9 Original Pattern Description of *Chaotic Path to Breakthrough*

The contents of *Chaotic Path to Breakthrough* pattern in *Collaboration Patterns* is as follows (Iba and Iba Lab, 2014b):

Chaotic Path to Breakthrough

A new path awaits beyond the struggle of not knowing what to do.

The project is stuck and is making slow or no progress.

▼ In this context

Considering the project's schedule and efficiency, you become tempted to settle at a quality that is lower than the team's usual standards.

- It takes stamina to struggle through uncertainty.
- Deadlines are unmovable and approaching.
- Easily thought up ideas will never drive innovations.

▼ Therefore

Recapture the current situation as a chance to innovate new ways; stay where you are and thoroughly think through the situation. Continued silence is time spent carefully thinking; it is by no means wasted time. These situations should not be hurried or broken, but should be carefully thought out together as a team. Creating something truly new also requires creating new significance and meaning in the world.

▼ Consequently

New ideas, new methods, new values will be created in the world. These novelties will bump the project up a level that is higher than the one before the struggle began. After this breakthrough, the project will again begin to rapidly progress, perhaps causing an *Emergence Vigor* (14). At this stage in the project, it may be helpful to rethink the *Roadmap to the Finish* (21) because situations may have changed.

A.10 Original Pattern Description of *Ideas Taking Shape*

The contents of *Ideas Taking Shape* pattern in *Collaboration Patterns* is as follows (Iba and Iba Lab, 2014b):

Ideas Taking Shape

Some ideas are better explained visually.

You have an idea you want to share with your teammates.

▼ In this context

The newer the idea is, the more people will not understand it.

- People cannot read others' minds.
- It is hard to imagine something that does not exist.
- Words are limited.

▼ Therefore

Visually shape your idea, so others can see it while you explain it. Draw a rough sketch or make a simple prototype that visualizes your idea so both you and others can see it. While creating the visualization, work out the details of the parts that were unclear in your head.

▼ Consequently

The ideas you have will be shared with the team. These visualizations will become *Spadework for Creativity* (23), and give new ideas to other members. Thus, you can easily become an *Inside Innovator* (20) in the team. Also by visualizing and explaining it to someone else, you can gain a better understanding about the idea.
